

White list Instruction G4

(White list can only be used with MONITOR version 09.00.14 and newer.)

White list is a Windows-service that will run on the MONITOR-server.

Setup

- Make sure that adaptation 894 is installed. Please contact our Support department if your system doesn't have adaptation 894.
- Monitor ERP System AB will send you the White list in .zip-format.

 Monitor.Application.Whitelist.Service.zip

- All files inside the zip-package needs to be installed in the "Monwin"-folder.
- Example: \\Server15\Monwin\Applications\Whitelist\

1. To install Whitelist as a service on the server you need to run the file:

 deleteservice_sc.bat	2020-02-28 13:01	Windows Batch File	1 KB
 installservice_sc.bat	2020-02-28 13:01	Windows Batch File	1 KB

2. The service is now added on the machine. But before you can "run" it, you need to set up the configuration file.

3. Open the file called "Monitor.Application.Whitelist.Service.exe.config" in a text-editor.

 Monitor.Application.Whitelist.Service.exe.config

4. Edit the values in: **FilePath**, **ErrorPath**, **Company** and **Days**.

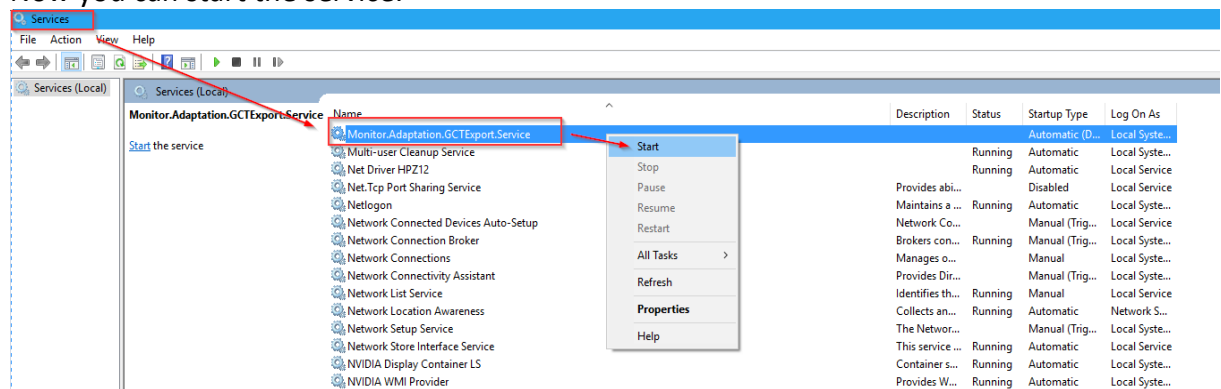

```
<appSettings>
  <add key="FilePath" value="D:\\Whitelist_test\\" />
  <add key="ErrorPath" value="D:\\Whitelist_test\\Error\\" />
  <add key="Company" value="005" />
  <!-- For multiple companies, use ';' as separator -->
```

FilePath = Where the service downloads the daily files

ErrorPath = Where the files that couldn't be imported shall be downloaded

Company = Which companies do you want to import the file to? Example: "001;002;006"
(Use ";" as a separator if you want to apply multiple companies.)

5. Now you can start the service.

The service will do the listed work automatically:

1. The service itself will execute 04:00 AM each morning. It starts with downloading a daily .7z-file from "<https://plikplaski.mf.gov.pl/pliki/>" and unzips it locally.
Remember that this URL needs to be accessible from the MONITOR server.
2. The service will import approximately 2 000 000 rows into the MONITOR-database.
3. The service deletes the downloaded content locally.
4. Sleeps to 04:00 next morning.
